

Faiz Ari Fadhilah

faiz.fadhilah@binus.ac.id | +6281266029266 | Tangerang, Banten

SUMMARY

CS undergraduate focused on Web Development, Machine Learning, and AI. Experienced in building web projects for a computer science organization and manages logistics and tech support for large campus events. [GitHub](#) | [Portfolio](#) | [LinkedIn](#) | [Instagram](#)

EDUCATION

BINUS University
Computer Science · Intelligent System · Tangerang, Banten
Focus: NLP, Machine Learning (XGBoost, Random Forest, SVM), Computer Vision, and Software Engineering.

Sep 2024 - Present
GPA - 3.69/4.00

ORGANIZATION EXPERIENCE

Web Development Activist • HIMTI BINUS University

Mar 2024 - Present

- Technical Contribution: Act as a Web Development activist within the Research and Development Comission of HIMTI BINUS, collaborating on digital initiatives and supporting the community's technical goals.
- Logistics & Operations Management: Directed end-to-end operations, equipment deployment, transportation, and consumption logistics across four major campus event cycles.
- Execution & Technical Support: Provided critical on-site technical support and streamlined cross-divisional communication to ensure seamless event delivery under tight timelines.

PROJECTS

ShipDeckK
A responsive learning web project built with HTML/CSS/JS showcasing a maritime catalog with interactive filters and form validation.

VolumeMate (TechnoScape 9.0 Finalist)
Developed VolumeMate for the TechnoScape 2026 Hackathon (BNCC x AD-INS)—a mobile-first PWA optimizing agricultural procurement—where I built the VolumeMind AI Engine using FastAPI & Python to forecast seasonal demand with >80% accuracy via a Gradient Boosting model. I implemented a robust validation pipeline using TimeSeriesSplit, created a "Volume Hack" algorithm to optimize bulk purchase costs against supplier price tiers, and integrated weather (BMKG) and cropping data to recommend optimal purchase timelines.

Particle Toggler
Particle Toggler is a client-side Minecraft performance and customization mod built in Java using the Fabric API and Mixins to give players granular control over in-game visual clutter. It allows users to selectively toggle every particle type and weather element in the game, including rain, snow, splashes, thunder audio, and storm fog, either individually or in bulk. Featuring a responsive, tabbed in-game GUI with real-time search, interactive chat commands with tab auto-completion, and automatic JSON configuration persistence, the mod enhances FPS and visibility while maintaining a clean, native user experience.

Portfol.io
Portfol.io is a modern personal developer portfolio designed and engineered to showcase software projects, hackathon accomplishments, and technical experiences. Built with React 19, TypeScript, Tailwind CSS, and Framer Motion, the site features kinetic pinned scroll sequences, high-voltage electric contrast typography, custom cursor lens interactions, and fluid responsive layouts across all screen sizes.

SKILLS

- Python
- Computer Vision
- NumPy
- Scikit-learn
- NodeJs
- React
- C
- Machine Learning
- SciPy
- Java
- NextJs

VOLUNTEERING EXPERIENCE

PKM HIMTI 2026 • HIMTI BINUS University Jul 2025 - Oct 2025

- Technical & Equipment Setup: Managed technical preparation and computer lab equipment to ensure a smooth learning environment for a high school C programming workshop.
- Operations & Logistics: Coordinated transportation and consumption logistics for the team, keeping daily operations running on time with zero downtime during teaching sessions.
